

Task 1: DNS lookup of www.flipkart.com

In Kali Linux with:

- nslookup www.flipkart.com

DNS record types:

- nslookup -type=NS flipkart.com
- nslookup -type=MX flipkart.com
- nslookup -type=TXT flipkart.com

Domain: www.flipkart.com

IPv4 address observed: 103.243.32.90

DNS information discovered:

- CNAME: www.flipkart.com → flipkart.com
- Nameservers include:
 - sdns14.ultradns.biz
 - sdns14.ultradns.com
 - sdns14.ultradns.net
 - sdns14.ultradns.org
- MX records point to Mimecast mail servers.

Task 2: Google dorking for college-related Instagram profiles

The assignment gives:

- site:instagram.com "@yourcollege.ac.in"

Replace the example domain with your actual college domain.

For example, if your college domain were:

- site:instagram.com "@examplecollege.ac.in"

You can refine the search with:

- site:instagram.com "examplecollege"

Task 3: WHOIS information for zomato.com

Run:

- whois zomato.com

Current WHOIS information reports:

Information	Finding
-------------	---------

Domain	zomato.com
Registration date	February 24, 2006
Country	India (IN)
Registrar	101domain GRS Limited

The public WHOIS record currently lists the registrant country as IN and the domain creation date as February 24, 2006.

For the organization name, current public WHOIS information can be privacy-redacted, so don't invent an organization name from an old record. Certificate transparency records have identified Eternal Limited and previously Zomato Limited in certificates for the domain, but that's certificate information rather than necessarily the current WHOIS registrant.

Task 4: Subdomains of myntra.com

A public subdomain enumeration source currently lists several subdomains of myntra.com:

1. cdn.myntra.com
2. secure.myntra.com
3. jobs.myntra.com

Task 5: Screen-capture task

Step 1 — Open Kali Terminal

- nslookup paytm.com

Step 2 — Show the result

- Point out the returned IP address.

Step 3 — Check nameservers

- nslookup -type=NS paytm.com

Step 4 — Check mail records

- nslookup -type=MX paytm.com
