

Task 1: Use netstat to list open ports

On Windows

Open Command Prompt as Administrator and run:

- netstat -ano

```
C:\Windows\System32>netstat -ano

Active Connections

```

Proto	Local Address	Foreign Address	State	PID
TCP	0.0.0.0:80	0.0.0.0:0	LISTENING	4
TCP	0.0.0.0:135	0.0.0.0:0	LISTENING	1840
TCP	0.0.0.0:445	0.0.0.0:0	LISTENING	4
TCP	0.0.0.0:902	0.0.0.0:0	LISTENING	5700
TCP	0.0.0.0:912	0.0.0.0:0	LISTENING	5700
TCP	0.0.0.0:3306	0.0.0.0:0	LISTENING	6884
TCP	0.0.0.0:5040	0.0.0.0:0	LISTENING	10300
TCP	0.0.0.0:33060	0.0.0.0:0	LISTENING	6884
TCP	0.0.0.0:49664	0.0.0.0:0	LISTENING	1520
TCP	0.0.0.0:49665	0.0.0.0:0	LISTENING	1348
TCP	0.0.0.0:49666	0.0.0.0:0	LISTENING	2440
TCP	0.0.0.0:49667	0.0.0.0:0	LISTENING	3408
TCP	0.0.0.0:49668	0.0.0.0:0	LISTENING	5092
TCP	0.0.0.0:49673	0.0.0.0:0	LISTENING	1492
TCP	0.0.0.0:49691	0.0.0.0:0	LISTENING	10788

On Kali linux

Run:

- netstat -tulpn

Task 2: Check applications using ports 80 and 443

Kali Linux

Run:

- sudo lsof -i :80
- sudo lsof -i :443

or:

- sudo ss -ltnp | grep -E '':80|:443'

Task 3: Scan your own system with Nmap

Kali

- ip addr

Suppose your own IP is:

- 192.168.182.138

Run:

nmap -sV 192.168.182.138

Task 4: Check ports used by a daily application

Let's use a local web server because it's easy to demonstrate safely.

For example, if you have Apache running on Kali:

- sudo systemctl start apache2

Check its listening ports:

- sudo ss -ltnp | grep apache2

```
(root@kali)-[~]
# systemctl start apache2

(root@kali)-[~]
# ss -ltnp | grep apache2
LISTEN 0      511          *:80          *: *    users:((("apache2",pid=41022,fd=4),("apache2",pid=41021,fd=4),("apache2",pid=41020,fd=4),("apache2",pid=41019,fd=4),("apache2",pid=41018,fd=4),("apache2",pid=41007,fd=4)))
```
