

Task 1: Check Windows Security Status

I opened Windows Security on my Windows computer and checked the following sections:

- Virus & threat protection
- Firewall & network protection
- App & browser control

Steps

1. Press Windows + I to open Settings.
2. Go to Privacy & security → Windows Security.
3. Select Virus & threat protection and check its status.
4. Go back and select Firewall & network protection.
5. Check the status of the Domain, Private, and Public network firewall.
6. Select App & browser control and check the available protection settings.

Task 2: Create a New Windows User Account

Steps

1. Open Settings.
2. Go to Accounts → Other users.
3. Select Add account.
4. Choose the option to add a user without requiring a Microsoft account, if a local account is desired.
5. Enter the username.
6. Set a strong password.
7. Complete the account creation process.

Password Requirements

The password should contain at least three of the following four character types:

- Uppercase letters: A-Z
- Lowercase letters: a-z
- Numbers: 0-9
- Special characters: ! @ # \$ %

Task 3: Disable Public Folder File Sharing

Steps

1. Open Control Panel.
2. Select Network and Sharing Center.
3. Select Change advanced sharing settings.
4. Expand the appropriate network profile.
5. Under All Networks, locate Public folder sharing.
6. Select:
 - Turn off Public folder sharing
7. Click Save changes.

Task 4: Block an Application Using Windows Firewall

Steps

1. Open Control Panel.
2. Go to System and Security → Windows Defender Firewall.

3. Select Advanced settings.
4. Select Outbound Rules.
5. Click New Rule.
6. Select Program and browse to the application's executable file, such as Chrome's chrome.exe.
7. Select Block the connection.
8. Apply the rule to the required network profiles.
9. Give the rule a name such as:
 - Block Chrome Internet Access
10. Save the firewall rule.
