

Task 1: Find PDF files about IPL cricket rules

Search query used

- filetype:pdf IPL match playing conditions

Example PDF links found

1. IPL Match Playing Conditions PDF
2. TATA IPL 2025 Match Playing Conditions PDF
3. TATA IPL Playing Conditions PDF (Archive)

Task 2: Search for Zomato login pages

Search query used

- inurl:login site:zomato.com

Why it works

- site:zomato.com restricts results to the Zomato domain.
- inurl:login searches for pages containing the word login in the URL.
- This helps identify publicly indexed login-related pages without attempting access.

Example explanation for assignment

- Google searches pages that are publicly indexed. By combining site: and inurl:, we can quickly locate login-related pages belonging to a specific organization. Security teams often use this technique to understand what public-facing pages are exposed to search engines.

Task 3: Find Spotify-related playlist Excel files

Search query used

- site:spotify.com (filetype:xls OR filetype:xlsx) playlist

Result

During research, no publicly indexed Excel spreadsheet containing playlist data was readily available from Spotify-owned domains. This is actually a common finding because major companies generally prevent sensitive spreadsheets from being indexed.

Task 4: Identify possible admin panels

Dork used

- `intitle:admin site:flipkart.com`

Alternative:

- `inurl:admin site:myntra.com`

Why this works

- `intitle:admin` searches for pages containing admin in the page title.
- `inurl:admin` searches for pages containing admin in the URL.
- `site:` restricts results to a specific organization.
