

Task 1: Download Ubuntu Desktop and Create a Bootable USB

Steps

1. Visit the official Ubuntu Desktop website.
2. Download the latest Ubuntu Desktop ISO image.
3. Insert a USB drive into the computer.
4. Open Rufus or Balena Etcher.
5. Select the downloaded Ubuntu ISO file.
6. Select the USB drive as the target device.
7. Start the process and wait until the bootable USB is created.
8. Safely eject the USB after the process is completed.

Task 2: Install Ubuntu Desktop in a Virtual Machine

Steps

1. Open VMware Workstation.
2. Select Create a New Virtual Machine.
3. Select the downloaded Ubuntu ISO file.
4. Set the virtual machine name to Ubuntu Desktop.
5. Allocate suitable resources, for example:
 - RAM: 4 GB
 - CPU: 2 processor cores
 - Storage: 25–30 GB
6. Start the virtual machine.
7. Select Install Ubuntu.
8. Choose the appropriate keyboard layout and installation options.
9. Create the required user account.
10. Complete the installation.
11. Restart the virtual machine when prompted.
12. Log in to Ubuntu and verify that the desktop loads successfully.

Task 3: Create the User Account

During the Ubuntu installation, I created the following user account:

Setting	Value
Username	cyberstudent
Password	A strong password containing letters, numbers, and symbols

Password Example

A suitable format would be:

Cyber@2026!Student

Important: The password shown above is only an example. I should use a unique password for my actual account and should not share my real password in the assignment.

Security Requirements

The password should:

- Contain at least 8 characters.
- Include uppercase and lowercase letters.
- Include numbers.
- Include special characters.
- Not contain easily guessable personal information.

Task 4: Display Ubuntu OS Information

After logging into Ubuntu, I opened the Terminal using:

- Ctrl + Alt + T

I ran:

- `uname -a`

This command displays information about the Linux kernel and operating system environment.

Save the Output to os-info.txt

I used:

- `uname -a > os-info.txt`

To check the contents of the file:

- `cat os-info.txt`
