

Task 1: Install Linux and Login

Steps

1. Download the Ubuntu Desktop ISO.
2. Open VMware Workstation/VirtualBox.
3. Create a new virtual machine.
4. Select the Ubuntu ISO as the installation media.
5. Allocate suitable RAM, CPU, and storage.
6. Install Ubuntu and create a user account.
7. After installation, open the Terminal.
8. Log in using the created Linux user account.

Task 2: Navigate to the Downloads Folder

1. Check the current directory
 - `pwd`
2. Move to the Downloads directory
 - `cd ~/Downloads`
3. List the files
 - `ls`

The `ls` command displays the files and directories present in the current directory

Task 3: Create Directory and Three Empty Files

The required directory is `music_playlist`, and it should contain:

- `song1.mp3`
- `song2.mp3`
- `song3.mp3`

```
mkdir -p ~/music_playlist touch ~/music_playlist/song1.mp3  
~/music_playlist/song2.mp3 ~/music_playlist/song3.mp3
```

Verify the files

- `ls -l ~/music_playlist`

Task 4: Change Directory Permissions

The requirement is:

- Owner: Read, Write, Execute
- Group: No permissions
- Others: No permissions

The correct numeric permission is:
700

Use:

- `chmod 700 ~/music_playlist`

Task 5: Use the man Command for grep

Open the manual page:

- `man grep`

To search inside the manual, you can type:

- `/pattern`

One-line summary

- `grep` searches text for lines that match a specified pattern and displays the matching lines.
